Aff. Asses Assignment - 6.

examples of different testing tech.

1. Equivalence partitioning technique:

eg. Assume that there is function of a software applⁿ that accept a particular number of digit, not greter and less than that particulae number.

like otp number which contain only six digit.

mor than or leos than six not Acceptable.

anothee example is

mobile number which is not less than or gretee than ten.

2. Boundry value Analysis:

Boundry values are those that contain uppee and lower limit of variable.

age is variable of any fun and it is minimum value is 18 & maximum value is 30 will be considered as Boundry values.
